

The Genome, The Bleed and The Clot

Past, Present, and Future News from the ISGC

Issue 8- OCT 18, 2024

What's in the news?

Highlights of the 31th ISGC Workshop in Los Angeles

We had a productive meeting in Los Angeles, where several discussions sparked conversations and fostered new collaborations. Keynote speakers included Manish Butte, who explored the wide range of genetic disorders manifesting as immunologic diseases; Timothy Chang, who examined the application of genome sequencing to better understand the pathophysiology of progressive supranuclear palsy; and Noah Zaitlen, who addressed genetic associations with environmental exposures. One night, we enjoyed a fun and delicious dinner at a restaurant in Beverly Hills, followed by another evening in Hollywood, ensuring a memorable experience for everyone.
